

B2-1

1) Prait, point

$$2) F_A = (100 \times 0.5 = 50 \text{ g} = F_B \\ 8 = 100 \text{ g}$$

F_2 混合後 $F_1 = 200 \text{ g}$

$$\alpha_{F1A} = \frac{50}{200} \times 100 = 25 \text{ wt\%} = \alpha_{F1B}$$

混合点を図示し、分離せると。

R₁相 $\alpha_{R1B} = \underbrace{15}_{1}, \text{wt\%}$,

E₁相 $\alpha_{E1B} = \underbrace{28}_{4} \text{ wt\%}$.

3) 定規で F_1, E_1 と F_1, R_1 を測ると

$$\frac{F_1}{R_1} = \frac{F_1 R_1}{F_1 E_1} = \frac{4.1}{1.3} = 3.15$$

よし $E_1 = \frac{3.15}{4.15} \times 200 = 152$

$$R_1 = 48 \approx \underbrace{50}_{1}, \text{g}$$

∴ 100g + 加えると $F_2 = 150 \text{ g}$

$$R_{1B} = 50 \times 0.15 = 7.5 \text{ g. なる}$$

$$\alpha_{F2B} = \frac{7.5}{150} \times 100 = 5 \text{ wt\%}$$

混合点を 7° 口にし、分離せると。

$$\alpha_{R2B} = \underbrace{2}_{1}, \text{wt\%}$$
